*About***US**

Vision

Become the leading minerals commercializing in Latin America and a benchmark in the worldwide field.

Mision

Offer our clients the highest quality standards of the products we commercialize and the procedures processes and transaction that the item entails. Focused on the satisfaction of those who prefer us through the resources materials optimization and administrative.

Quality Policies

Grupo Comin is committed to maintaining in force standards of continuous improvement in the effectiveness from the Quality Management System, fully in accordance with the requirements demanded internationally for this operations type.

Environmental **Policies**

Plan and manage all the processes that involve environmental aspects, where we commit ourselves to promote among our associates the respect and environment protection, in accordance with current regulations and the commitments that are acquired, in this way we are ensuring the continuous improvement and sustainable development of the sector.

Our Main Products

***Mineral
Commerce/Exploration/Exploitation/Operation/Labora-
tory/ Certification***

We offer our customers, producers and minerals buyers, the widest experience in the international market, delivering quality products and services with efficient and profitable commercialization processes.

Our Services

Exploration

We advise on the initial stage of mining activity, where the best professionals provide their services to identify the areas where the mineral deposits are located, which - depending on their size and composition - will be exploited in a mining project.

Operation

In this phase we advise for the completion of the planning and they execute the infrastructure works necessary to carry out the operation. The works will depend on the extraction method as well as the infrastructure for the transport of the mineral. We have experts for the feasibility study that will allow us to select the exploitation method (underground or open pit), according to the characteristics of the deposit and its viability.

Our Services

Exploitation

We provide services in terms of the various tools and special machinery to delimit the mineral vein, carrying out the necessary studies by submitting the necessary documents and permits, plus human resources, which will allow obtaining those minerals that were generated and remain exceptionally in some soils after various geological processes, in the different mining stages.

Laboratory

The diagnosis is made by a group of specialists, with techniques, instruments and laboratory equipment, which is practiced on the extracted samples (rocks, minerals and others), to establish their composition and properties.

Certification

We endorse the authorized organism to validate the aspects of the rock or mineral (quality, fidelity, purity, among others.), which will issue the proof or document certifying the extracted mineral or rock.

Our Services

Customs **Management**

We provide our clients with reliable advice in customs in terms of management and coordination, together with the best customs agencies expert in mining imports and exports.
